DIGITAL I.T STRATEGY FRAMEWORK

In this briefing paper, we outline the strategy methodology for developing a digital I.T strategy, architecture blueprint and roadmap, aligning business strategy, and technology innovation.

The need for a sound digital system strategy based on in-depth analysis will help predict risks, identify the right solution architecture to achieve improvements through the implementation of emerging digital technology.

Developing an I.T plan eliminates firefighting in response to emerging technology, system obsolescence, and digital disruption.

A digital I.T strategy will help in managing I.T budgets, identify the right technology and innovation, plan future system projects, and balancing organisational change with digital transformation.
